**DETAILED ACTION**

1. Applicants' response to the office action filed on June 21, 2007 have been considered and acknowledged. The terminal disclaimer and amendment to the drawings filed on June 21, 2007 have been considered.

2. The following is an examiner's statement of reasons for allowance:

Claims 2-7, 13-15, 17-28 are allowed.

The present invention is drawn to a method for detecting the presence of one or more analytes in solution comprising binding two or more proximity probes to respective binding sites on said one or more analytes not immobilized on a solid support, wherein each proximity probe comprises a binding moiety with affinity for said analytes and nucleic acids acting as a reactive functionality coupled to the binding moiety, allowing the binding moiety to bind to said one or more analytes, allowing the nucleic acids of the proximity probes to interact with each other if the proximity probes are in close proximity to each other and detecting the degree of interaction between the nucleic acids, thereby detecting the presence or absence of one or more analytes. The closest prior art Landegren in view of Ebersole teach a method for detecting one or more analytes using proximity probes however the closest prior art did not specifically teach solution based hybridization without immobilizing the analytes. The declaration filed on 3/28/ 05 supports that the invention is not taught and unobvious. Thus the instant invention was not taught or obvious over the closest prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
